Introduction

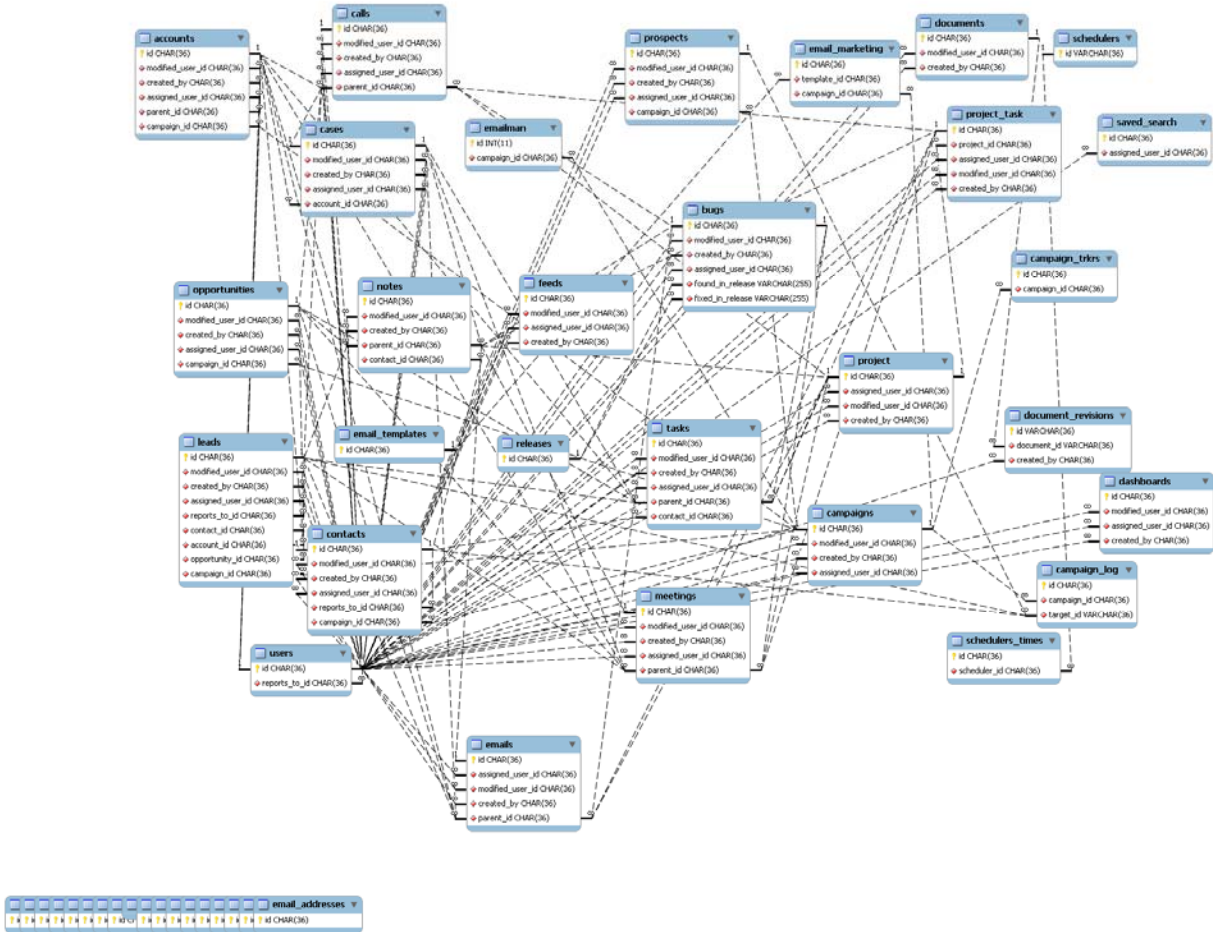

The following diagrams represent the entities of the Sugar 5.2 Community Edition system. These diagrams are broken down by the main modules, in addition to a complete diagram. For each table, only columns used as primary key or foreign keys are displayed.

The “Activities” diagram showcases the relationship between each object with the activities tables using the Cases module as an example.

The “Users” diagram showcases the relationship between each object with the users table using the Opportunities module as an example.

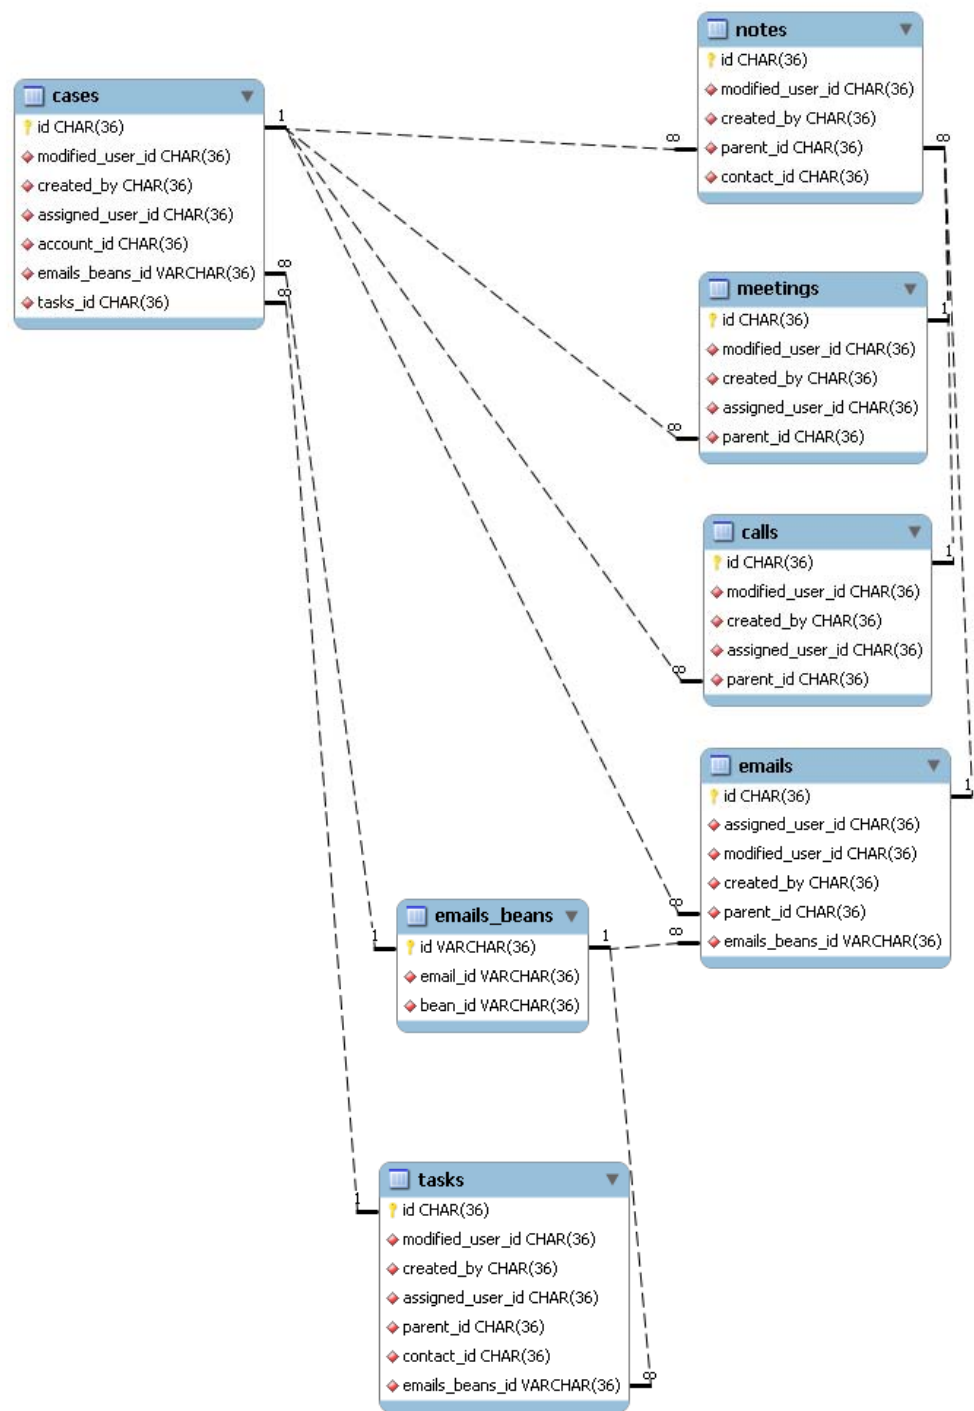

The activities tables and user tables are, therefore, removed from the diagram of each module, unless an additional relationship is present.

Complete

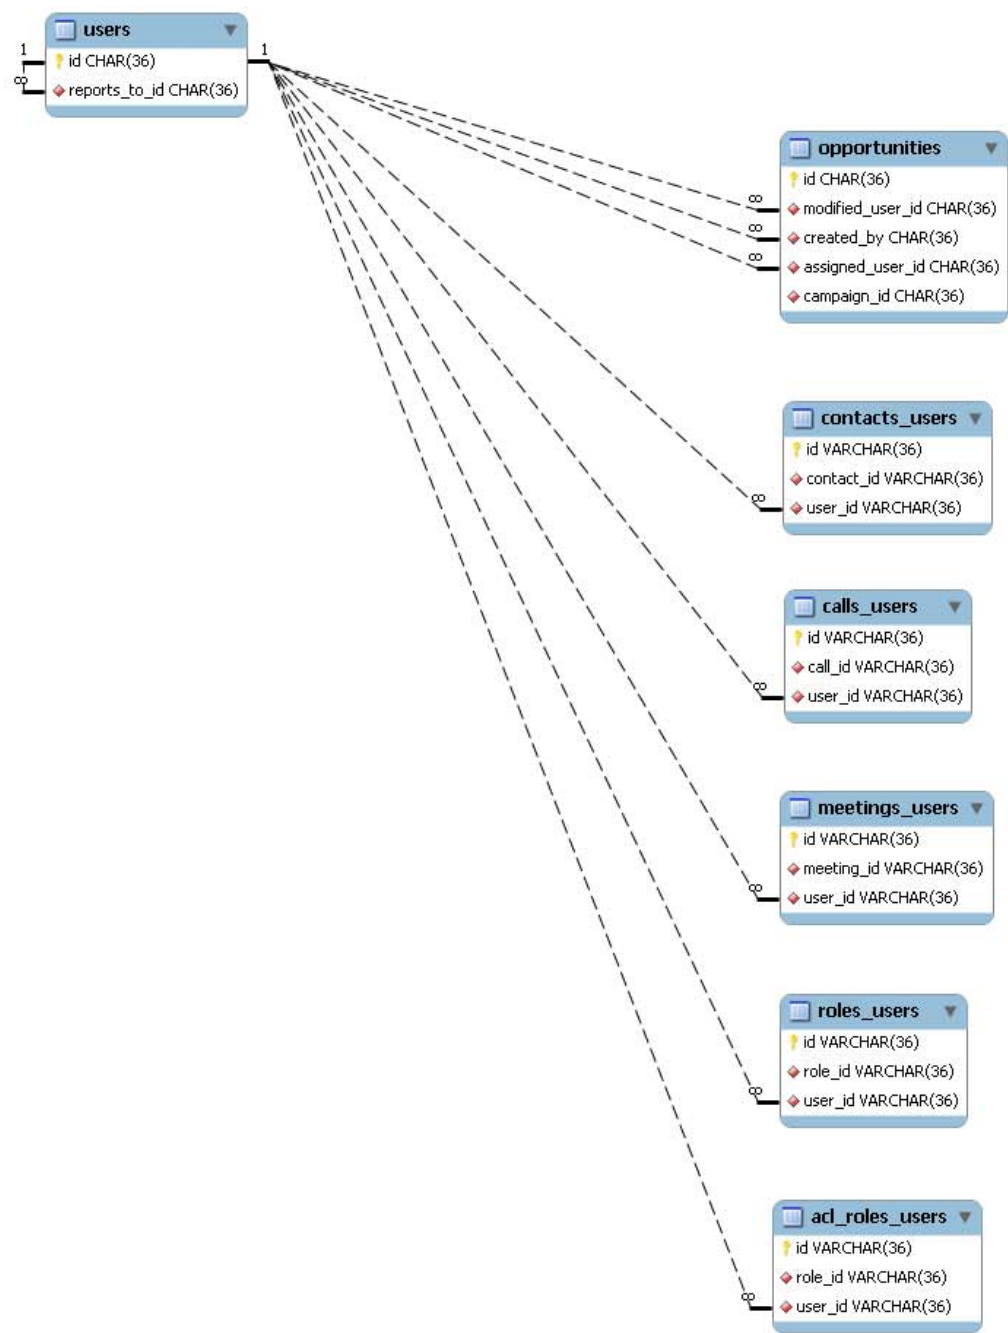

Activities

The “Activities” diagram showcases the relationship between each object with the activities tables using the Cases module as an example.

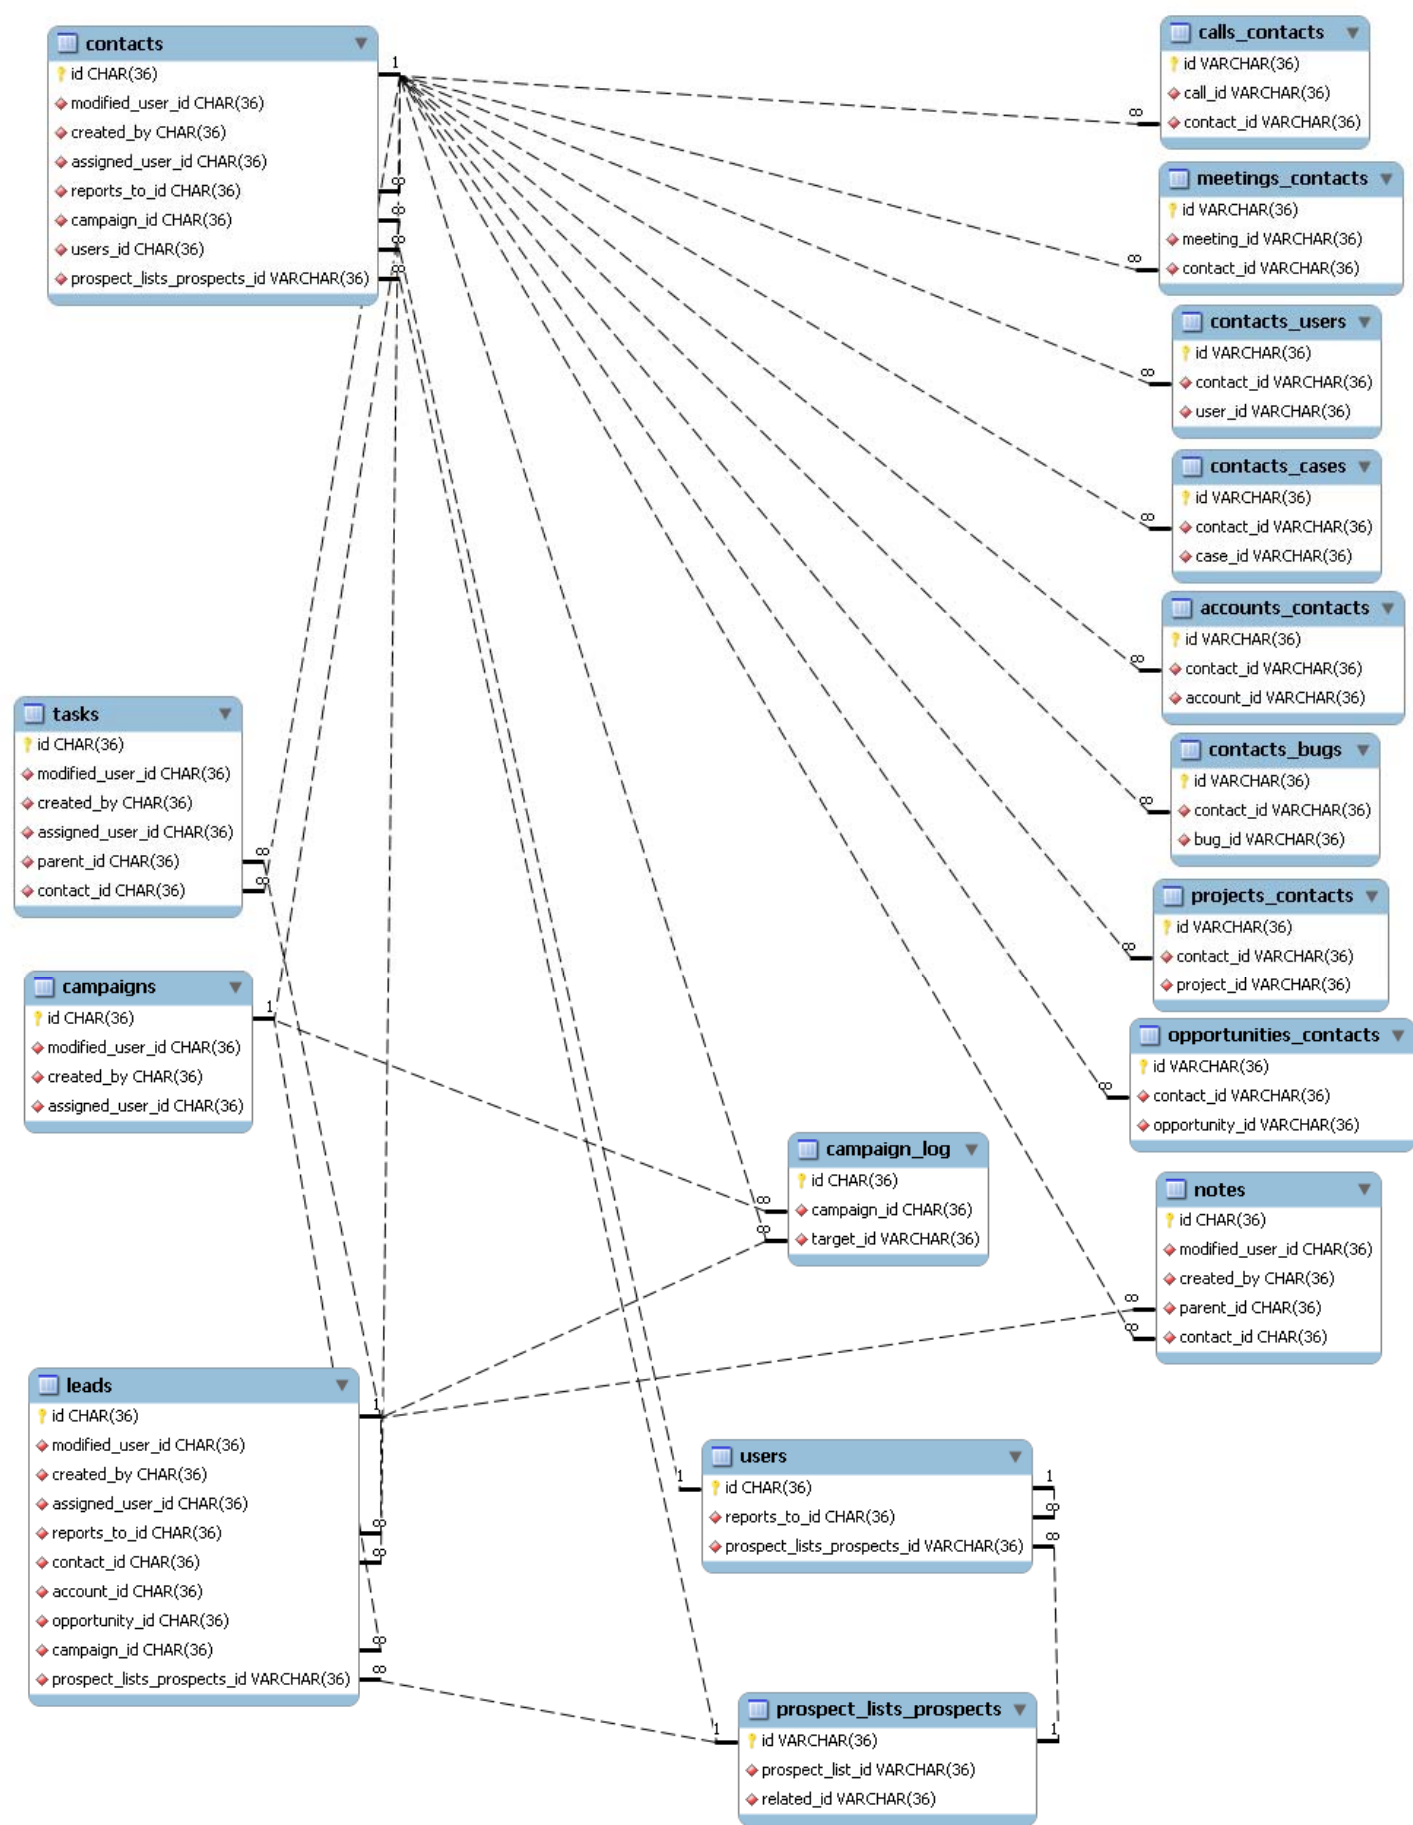

Users

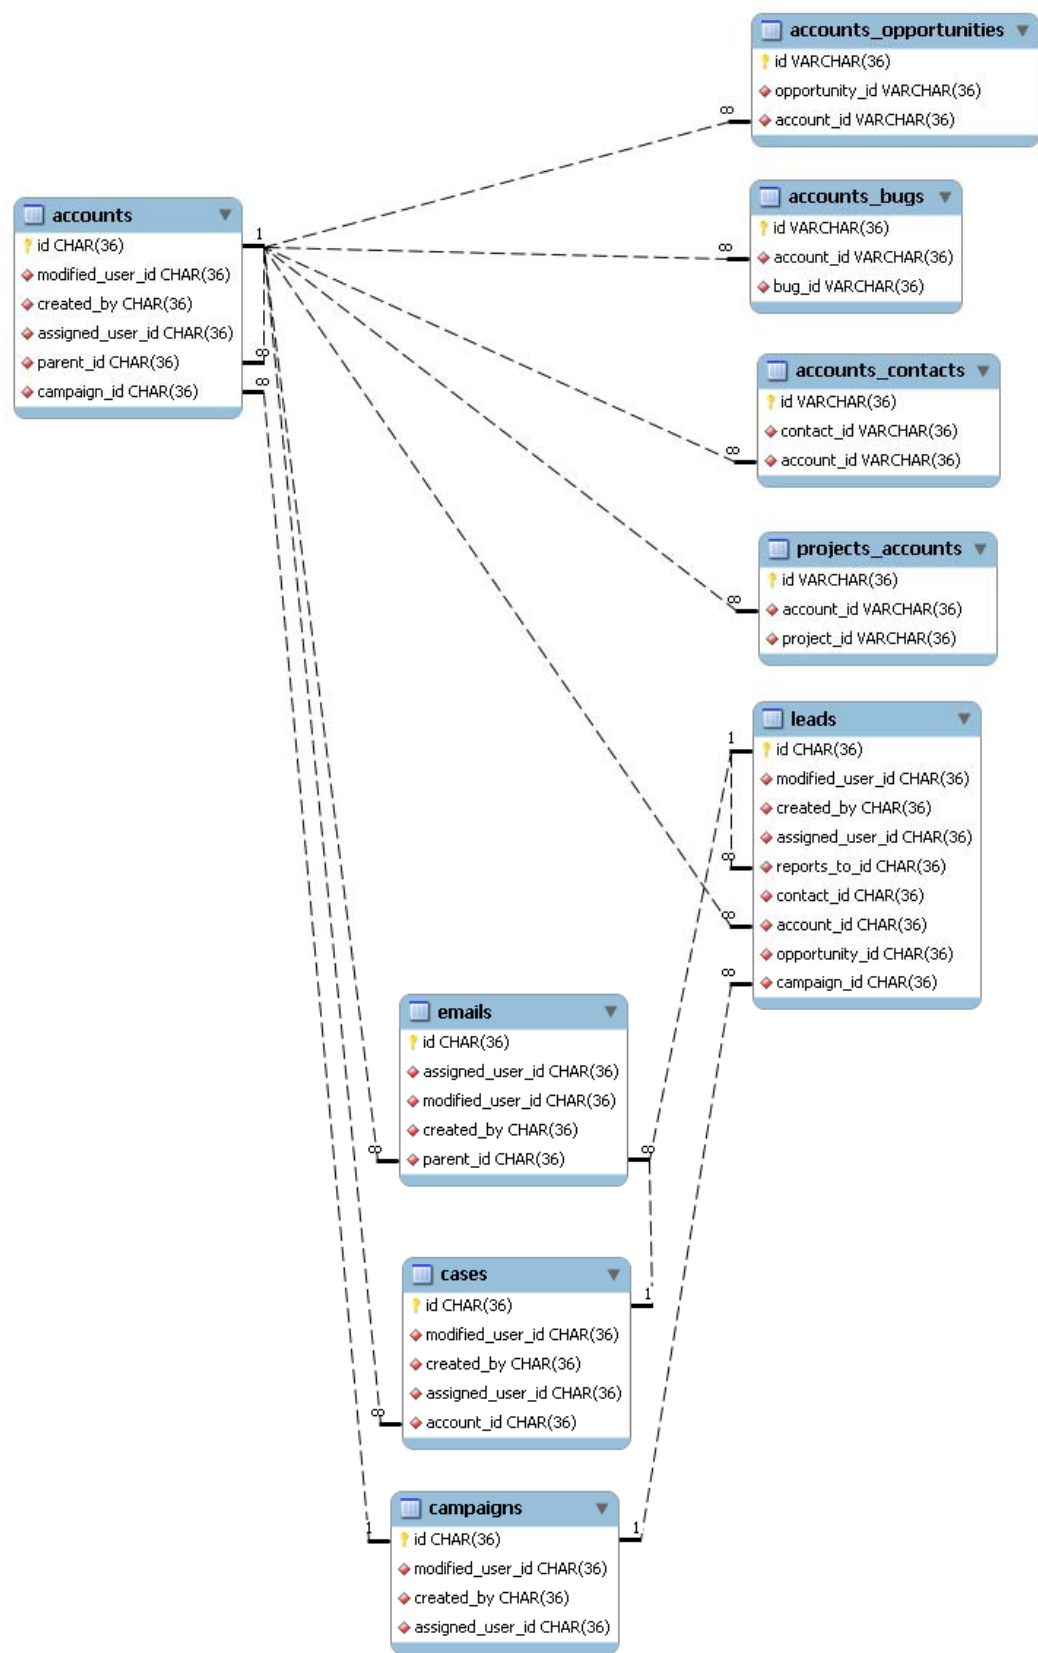

The “Users” diagram showcases the relationship between each object with the users table using the Opportunities module as an example.
